

# Exercise 3: Bibliography

Marcy Shieh

9/24/2020

1. Add all the readings you did in seminars this week to Zotero.
2. Create a R Markdown file using the APA papaja template in your ps811-exercises repository. Save it as **exercise-3-bib.Rmd**.
3. Customize the template to refer to this particular assignment.
4. Cite each reading without parentheses and write a paragraph about each reading that includes information on:
  - Main argument (what is the question? theory?)
  - Data (what is the data source? from a data set? from a survey?)
  - Methods (what did the author(s) use? text analysis? regression analysis? an experiment?)
  - Conclusion (what did the author(s) find?)

If you take good notes for your readings (as you should, for prelims prep), this exercise should be a breeze.

5. Each group of readings should go under a header with the name of the seminar.
6. Knit to PDF.
7. Create a **beamer** presentation of what you liked and didn't like about the readings this week. In essence, just make three slides:
  - A title slide
  - Pros
  - Cons
  - Reference page
8. Email me (mshieh2@wisc.edu) the link to your **ps811-exercises** repository when you are done.
